

FIGS

Figs are not only a sweet, delicious summer treat, they are easy to grow and their beautiful foliage and form adds a tropical look to the garden.

Green, bronze and mahogany colored fruit with juicy amber or white flesh ripens during hot summer months. Ripe fruit will be soft to the touch and they will wilt on the stem. Many of our varieties produce a second crop of fruit in September, and **all of the varieties we carry are self-fertile.**

Fig trees are pest-free, adaptable to many climate and soil conditions, and drought tolerant once established. They can be pruned to stay small, espaliered onto a fence or hot wall, or allowed to sprawl.

Grows to 15-20', loves sun & heat, hardy in Z 7-9.

BLACK MISSION	Highest quality, the taste standard for figs. Med-large, pear-shaped fruit with rough, deep purple skin and bright red flesh. Heavy bearing, long lived tree.
BLACK SPANISH	An extremely hardy, fast grower originating in Spain, it often yields two crops of sweet, mahogany fruit.
BROWN TURKEY	Medium to large fruit with brownish-maroon skin and sweet, juicy, firm, meaty flesh. Excellent all-purpose. Ripens in September.
CHICAGO HARDY	Similar to Brown Turkey but even hardier to cold, to minus ten degrees! Brown-purple fruit is meaty and rich, very sweet too. Highly productive from an early age.
EXCELL	Excellent all-purpose fig yields large, yellow fruit with sweet, amber flesh.
KING	Heavy yielding variety produces large, high quality, green fruit with amber flesh. Great fresh, canned, or dried.
LATTARULA (Italian Honey)	Greenish-yellow fruit with sweet, amber colored flesh. Good all-purpose. Well adapted to the PNW. May ripen two crops, one in July and one in September.
NEGRONNE	Vigorous, extremely hardy Mission-type fig suited to cooler areas. Produces two crops of small, jet-black fruit with deep red flesh and fine flavor.
OLYMPIAN	Green-purple striped fruits with flavorful, violet flesh. Usually produces two crops per year. Well suited to the cooler maritime climate of the PNW.
OREGON PROLIFIC	Yellow-green skinned fruit with good flavor. Excellent quality fruit for fresh eating or canning. Well adapted to the Northwest. Heavy producer. Ripens in August.
PANACHE	Small fruits are green striped yellow with strawberry flesh. Very unusual, old variety with occasionally variegated young branches. USDA zones 8-10.
PETER'S HONEY	Lovely, greenish-yellow fruit with dark amber flesh and very sweet flavor super for fresh eating. Requires plenty of hot sun to ripen fully.
PETITE NEGRA	Naturally dwarf tree suitable for pot culture. Fruit is large, black, and richly sweet.
STELLA	Suited to cooler climates, Stella yields large fruit with sweet, reddish-purple flesh.
VERN'S BROWN TURKEY	Brown skinned fruit with sweet, amber flesh. Excellent all-purpose. Reliable producer, two crops in most years. Ripens in July-Sept.
